

# SETTING UP A 9706F4 FOUNTAIN

- 1) Set your 6027H Basin on your chosen area after ensuring the location is firm and level. Rotate the Basin in order to place the small opening (“mousehole”) at the bottom edge is closest to your electrical supply.
- 2) Preassemble components of the fountain top. Attach tube to the barb under the AB870 Light. Then from the top, pass the tube and the light power cord together down through the opening in the top of the 4027BH Top. Allow the light ring to sit snug in the recess on top of the concrete piece.
- 3) Slip the Restrictor onto the tube, closing it only tight enough to stay in place just below the 4027BH. Set the 4027BH down for the moment.
- 4) Thread the barbed adapter into the pump. Push the pump with its adapter into the other end of the tube.
- 5) Install the rubber stopper around the pump cord (use the larger hole) about 12” below the pump. Place the cord (smaller hole) in the stopper where the cord is about three feet from the light.
- 6) Rest the 4027BH on the 6027H (with some padding, like a burlap bag in between). The pump should settle in the lower, center part of the basin and the two power cords should be slipped down through the hole in the center of the basin. Reach under the basin piece and pull the cords out the mousehole.
- 7) Reaching back into the lower, center part of the basin, push the stopper into the center hole until it is tight.
- 8) Remove the padding and set the 4027BH on the 6027H. Fill the basin with water, read your pump and light instructions, and plug both units into a GFCI outlet. Attach the frogs as shown and enjoy your new fountain.

## IMPORTANT – WINTER CARE

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- \* Disconnect power to pumps and lights.
- \* Remove plugs / stopper in all fountain bowls to open drains and let all moisture out. Keep drains open throughout winter.
- \* Place an absorbant material like burlap, blankets, etc. inside vases/bowls and cover all with a Henri fountain cover.
- \* Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use salt or chemical ice removers as these may damage concrete.

By following these simple and sensible precautions during the winter season, you will protect your fountain for years of beauty and enjoyment.
